Full Stack Developer with a focus on developing APIs and microservices using Node.js, JavaScript, and TypeScript, also working on applications with React and Vue.js. Experienced in system integrations, graph database modeling and querying with Neo4j, and containerized applications using Docker. Skilled in implementing and evolving systems, with a focus on impact analysis, maintainability, performance, improving modularity, and reducing coupling. Currently deepening knowledge of software engineering and architecture, particularly in modularity and system design.

Experiences

VEXUR

Full-Stack / Back-end Node.js Developer | September 2024 - Present

- Cooper Card Payment System Integration: Designed and developed an integration for generating and managing commission payment files using Fastify, TypeScript, Neo4j, and Vue 3, with export history tracking and traceability.
- MedSênior Integration: Develop and maintain the integration responsible for the proposal onboarding process with MedSênior, handling the end-to-end workflow, from data submission and adaptation to response processing, digital signing, and proposal implementation. Also developed an interface for tracking proposal status and progress.
- MXM Integration: Maintain and evolve the integration with the MXM ERP, responsible for customer synchronization and the submission of accounts receivable. Developed automated processes for periodic customer registration and submission of accounts receivable that have not yet been integrated, as well as an interface for monitoring processed customers and receivables.
- Email Communication System: Developed a reusable solution for generating email attachments, reducing code coupling and simplifying the creation and maintenance of new communications.
- Communication Viewer Migration: Participated in modernizing communication viewers by migrating applications from Vue 2 to React, improving maintainability and facilitating further development.
- Neo4j: Optimized Cypher queries and data modeling to simplify data retrieval and improve application performance, as well as contributing to the migration of queries from Neo4j 4 to Neo4j 5.

Tech: TypeScript, Node.js, Vue 2, Vue 3, React, Fastify, Neo4j, Docker.

Education

Technical High School Diploma | IT Technician - 2018/2021 - **IFPR**

Associate Degree in Internet Systems Technology - 2022/2025 - **IFPR**
